| Levuka | 13861 | 12843 | 14149 | 13176 | 8537 | 9625 | 4365 | 3891 | 4457 | 4491 | 4629 | 4080 | 4339 | 2179 | 1583 | 1162 | 1786 | 1487 | 2289 | 2248 | 5560 | 5550 | 5750 | 7600 | 6969 | 6543 | 6000 | 5511 | 5578 | 4440 | 3700 | 2800 | | Levuka |

These Distances have necessarily been measured both ways; e.g. the Distance for a Sailing Ship, or Vessel with only Auxiliary Steam Power, from Valparaiso to Callao is 1295 miles, but from Callao to Valparaiso the Distance is 2590 miles. Similarly the Distance from San Francisco to Manila is 6896 miles, but from Manila to San Francisco it is 6168 miles.

Take 25 miles from Gravesend Distances to find Liverpool Distances.

Add 100 miles to Gravesend Distances to find Glasgow Distances.

Take 67 miles from Gravesend Distances to find Dover Distances, and so connect with Baltic and North Sea ports. See p. 643A. Port Said is connected with European ports. See p. 643.

* Calling at Cape Town adds about 200 miles to these distances.

If bound to Atlantic ports of the U.S. or Halifax *from* the Pacific, add 7500 miles to the Cape Horn, and 6800 miles to the Cape of Good Hope Distances. If bound *to* the Pacific, add 7800 miles to the Cape Horn, and 7700 miles to the Cape of Good Hope Distances.

## TIME SIGNALS, 1902*

It will be noticed that many countries have now adopted a uniform time system.

Great Britain, Belgium, Netherlands, Spain, and Portugal have adopted Greenwich mean time as a standard.

In Ireland the mean time of the Observatory at Dublin is the standard, $25^m$ $22^s$ slow of G.M.T.

Austria-Hungary, Denmark, Germany, Italy, Norway and Sweden, and the British Colony of Malta have adopted the Meridian of 15° E. from Greenwich as a standard, or 1 hour fast of G.M.T. This is known as Mid European time. France and Algeria use the Meridian of Paris, $9^m$ $21^s$ fast of G.M.T.

Cape Colony has adopted the Meridian of 22½° E. as a standard, or 1½ hours fast of G.M.T. This is known as Cape Colony mean time. Egypt and Natal have adopted Meridian of 30° E., or $2^h$ fast of G.M.T.

Japan has adopted as a standard the Meridian of 135° East from Greenwich, or 9 hours fast of G.M.T. This is known as Japan mean time. Straits Settlements, Mer. of Ft. Fullerton, Singapore, $6^h$ $55^m$ $25^s$ fast of G.M.T.

In the Colony of West Australia and Phillipine Islands, the standard time of the Meridian of 120° E. of Greenwich, or 8 hours fast of G.M.T., has been established.

In the Colony of South Australia the standard time of the Meridian of 142° 30′ E. of Greenwich, or 9 hours 30 min. fast of G.M.T., has been established.

In the Colonies of Queensland, New South Wales, Victoria, and Tasmania the standard time of the Meridian of 150° E., or 10 hours fast of G.M.T. has been established.

New Zealand has adopted as a standard the Meridian of 172½° E. from Greenwich, or 11½ hours fast of G.M.T. This is known as New Zealand mean time.

In the United States of America, at the Atlantic ports and Cuba, the standard time of the Meridian of 75° W. of Greenwich, or 5 hours slow of G.M.T. has been established. At Pacific ports and British Columbia the standard time is that of the Meridian of 120° W., or 8 hours slow of G.M.T.*

* On Wednesdays and Saturdays. † Paris mean time.

‡ Guns fired and balls dropped at $1^h\ 00^m\ 00^s$ Mid-European time, throughout Norway, Austria, and Italy.

§ Throughout Egypt, the official time kept is standard time of the meridian of 30° E.

‖ Ball at Port Said dropped also at $8^h$ a.m. and $4^h$ p.m., standard time.

¶ All time balls on the Atlantic and Gulf of Mexico coasts of the United States are dropped at noon, mean time of the 75th meridian West from Greenwich—equivalent to $5^h\ 00^m\ 00^s$ p.m. Greenwich mean time.

** Balls dropped at noon, mean time of 120th meridian West from Greenwich.

N.B.—When the report of the gun is used allow for time of passage of sound. *See* p. 180.

* The figures in this column, divided by 6, will give the length, in cables, of a minute of longitude in it's corresponding latitude, thus: in latitude 84° 6·272 + 6 = 1·05 cable in a minute of longitude.

NOTE.—These tables have been calculated for every ten minutes of latitude, and are published by J. D. Potter, 145 Minories, E.

# TABLE 65.

## ABBREVIATIONS ADOPTED IN THE ADMIRALTY CHARTS, WITH EXPLANATORY NOTES.

### General Abbreviations.

| | |
|---|---|
| Anch$^{ge}$ | - *Anchorage.* |
| B. | - *Bay.* |
| B. (near a buoy) | *Black.* |
| Bat$^{y}$ | - *Battery.* |
| B$^{k}$ | - *Bank.* |
| C. | - *Cape.* |
| C.G. | - *Coast Guard.* |
| Cath. | - *Cathedral.* |
| Ch. | - *Church.* |
| Chan. | - *Channel.* |
| Cheq. (near a buoy.) | *Chequered.* |
| Col$^{d}$ | - *Coloured.* |
| Cr. | - *Creek.* |
| E.D. | - *Existence Doubtful.* |
| Fl$^{g}$ L$^{t}$ | - *Floating Light.* |
| Fms. | - *Fathoms.* |
| Ft. | - *Feet or Foot.* |
| G. | - *Gulf.* |
| G$^{t}$ | - *Great.* |
| H. | - *Hour.* |
| H$^{d}$ | - *Head.* |
| Ho. | - *House.* |
| H$^{r}$ | - *Harbour.* |
| H.S. (near a buoy) | *Horizontal Stripes.* |
| H.W. | - *High Water.* |
| H.W.F.&C. | *High Water, Full & Change.* |
| I. | - *Island.* |
| I$^{s}$ | - *Islands.* |
| Kn. | - *Knots.* |
| L. | - *Lake.* |
| Lat. | - *Latitude.* |
| Long. | - *Longitude.* |
| L$^{t}$ | - *Light.* |
| L$^{t}$ Alt. | - „ *Alternating.* |
| L$^{t}$ F.Fl. | - „ *Fixed and Flashing.* |
| L$^{t}$ F. | - „ *Fixed.* |
| L$^{t}$ Fl. | - „ *Flashing.* |
| L$^{t}$ Int. | - „ *Intermittent.* |
| L$^{t}$ Occ. | - „ *Occulting.* |
| L$^{t}$ Rev. | - „ *Revolving.* |
| L.W. | - *Low Water.* |
| m. (near a light) | *Nautical Mile.* |
| Mag$^{ne}$ | - *Magazine.* |
| Mag$^{c}$ | - *Magnetic.* |
| m.n. (near a light) | *Minutes.* |
| Mt. | - *Mountain.* |
| Np. | - *Neaps.* |
| Obs$^{n}$ Spot | *Observation Spot* + |
| P. | - *Port.* |
| P.D. | - *Position doubtful.* |
| P$^{k}$ | - *Peak.* |
| P$^{t}$ | - *Point.* |
| R. | - *River.* |
| R. (near a buoy) | *Red.* |
| R$^{f}$ | - *Reef.* |
| R$^{k}$ | - *Rock.* |

All charts and plans are, where practicable, constructed upon the True Meridian, *i.e.*, the East and the West marginal lines are drawn parallel to the True Meridian.

Soundings are reduced to mean Low Water of ordinary Spring tides, and are expressed in fathoms (of 6 feet) and fractions of a fathom, or in feet and fractions of a foot, such being denoted in the title of the Chart.

The underlined figures on the dry banks represent in feet or fathoms the depth of water over them at High Water, or the heights of the banks above Low Water. The method adopted is explained in the Title of the Chart. This dual system is being abolished, and in future all underlined figures will indicate feet above Low Water.

The *Velocity* of Tide is expressed in knots and fractions of a knot. The *Period* of the Tide being shown thus: 1$^{st}$ Q$^{r}$., 2$^{nd}$ Q$^{r}$., 3$^{rd}$ Q$^{r}$., 4$^{th}$ Q$^{r}$., for 1st, 2nd, 3rd, and 4th quarters.

The *Rise* of Tide is measured from the mean Low Water level of Ordinary Springs. The *Range* of Tide is measured from the Low Water of one tide to the High Water of the following tide. *See* Diagram on p. 844.

All heights are given in feet above High Water Ordinary Springs, and in places where there is no tide, above the level of the sea. [Exceptions to this general rule are stated on the title of the chart.]

All bearings, including the direction of winds and currents, are magnetic, except when otherwise expressed. Bearings of lights are given *as seen from seaward*, and not from the lights.

The natural scale, or the proportion which the Chart scale bears to the earth (obtained by reducing the number of feet in the minute of latitude to inches, and dividing the product by the scale), is represented thus $\frac{1}{12,150}$.

A cable's length is assumed to be equal to 100 fathoms; it is the 10th part of a sea mile.

*Soundings upon Foreign Charts are expressed thus:—*

| | | | | | | |
|---|---|---|---|---|---|---|
| Austrian | (Faden) = 6·223 | English feet, or | 1·037 | English fathoms | | |
| Chilian | (Metro) = 3·281 | " | " 0·547 | " | " | |
| Danish and Norwegian | (Favn) = 6·175 | " | " 1·029 | " | " | |
| Dutch (European) | (Vadem) = 5·575 | " | " 0·929 | " | " | |
| " (East Indian) | " = 5·905 | " | " 0·984 | " | " | |
| French | (Brasse) = 5·329 | " | " 0·888 | " | " | |
| " | (Mètre) = 3·281 | " | " 0·547 | " | " | |
| Italian | " = 3·281 | " | " 0·547 | " | " | |
| Japanese | (Fathom) = 6·000 | " | " 1·000 | " | " | |
| Portuguese | (Braca) = 6·024 | " | " 1·000 | " | " | |
| German | (Mètre) = 3·281 | " | " 0·547 | " | " | |
| Russian, Sashine or Fathom | (Сажень) = 6·000 | " | " 1·000 | " | " | |
| Spanish | (Braza) = 5·492 | " | " 0·915 | " | " | |
| Swedish | (Famn) = 5·843 | " | " 0·974 | " | " | |
| United States | (Fathom) = 6·000 | " | " 1·000 | " | " | |

The Dutch *Elle*, the Spanish, Portuguese, and Italian *Metro*, and also the French *Mètre*, are identical.

CHARACTERISTICS MARKED AGAINST LIGHTS ON THE ADMIRALTY CHARTS.

F. Fixed. A continuous steady light.

FL. Flashing. Showing a single flash.

GP. FL. Group flashing. Showing groups of two or more flashes in succession (not necessarily of the same colour), separated by eclipses.

F. & FL. Fixed and flashing. Fixed light varied by a single white or coloured flash, which may be preceded and followed by a short eclipse.

F. & GP. FL. Fixed and group flashing. The same as the preceding, but with groups of flashes.

REV. Revolving. Light gradually increasing to full effect, then decreasing to eclipse. [*At short distances and in clear weather a faint continuous light may be observed.*]

OCC. Occulting. A steady light with, at regular intervals, one sudden and total eclipse.

GP. OCC. Group occulting. A steady light with, at regular intervals, groups of two or more sudden and total eclipses.

*The note attached to Revolving lights is in some cases applicable.*

ALT. Alternating. Lights of different colours (generally red and white) alternately, without any intervening eclipse.

---

The distance the Lights are visible is calculated from a height of 15 feet above the sea at H.W. Lt.-vessels belonging to the Trinity House, London, are coloured *red*, have their Name painted on their sides, carry a Ball at *each* mast-head, fire a gun if a ship is standing into danger, and sound either a GONG or FOG HORN in foggy weather. A *white* Lt. is exhibited from the fore-stay of each Lt.-vessel, 6 feet above the rail, to show in which direction the vessel is riding.

When Lt.-vessels or other craft are placed to mark the position of *wrecks*, they will be distinguished by having their *top-sides coloured green*, and will exhibit, by day—*Three balls from a yard*, 20 feet above the sea; *two placed vertically on the side that shipping may safely pass*, and one on the other side. By night—*Three fixed white Lts. similarly arranged*, but the ordinary riding Lt. will not be shown. Mariners will thus know on sighting a wreck-marking vessel that she is so employed; and that *they should pass on that side of her on which the two balls or two Lts. are shown.*

## ADMIRALTY CHARTS.

s. d.

**On the Correction of Charts, Light Lists, and Sailing Directions;** and a Short History of the Hydrographic Department of the British Admiralty. *No charge.*

**Official Catalogue of Charts and 22 Index Charts.** *No charge.*

At Board of Trade inquiries reference is frequently made to the subject of charts and sailing directions. It is doubtful, however, if the general public has the remotest idea of the vast number of charts, plans and sailing directions which have been brought into existence by the cartographer. The making of charts is a never-ending task, for the simple reason that new dangers to navigation in the way of uncharted rocks and shoals are constantly being reported. Some conception of the amount of work done is afforded by the catalogue of Admiralty charts, plans and sailing directions issued by Mr. J. D. Potter, of 145, Minories, E.C. The volume, which is published by order of the Lords Commissioners of the Admiralty, consists of 260 pages, index charts, &c., and may be obtained gratis from Mr. Potter.—*Shipping Gazette and Lloyd's List*, May 7, 1909.

## ALTITUDE TABLES.

**Computed for Intervals of Four Minutes** between the Parallels of Latitude 31° and 60° and Parallels of Declination 0° and 24°, designed for the Determination of the Position Line at all Hour Angles without Logarithmic Computation, by *Frederick Ball, M.A. (late Scholar of Exeter College, Oxford), Chaplain and Naval Instructor in His Majesty's Fleet* ... ... ... ... ... ... ... ... 15 0

Ditto, ditto, between the Parallels of Latitude 0° and 30° and Parallels of Declination 0° and 24° ... ... ... ... ... ... ... ... ... ... ... 15 0

Ditto, ditto, between the Parallels of Latitude 24° and 60° and Parallels of Declination 24° and 60° ... ... ... ... ... ... ... ... ... ... ... 15 0

**Altitude and Azimuth Tables,** for Facilitating the Determination of Lines of Position and Geographical Position at Sea. The simplest and readiest in solution. Spherical Traverse Tables for solving all problems of navigation. By *Lieut. Radler de Aquino* (Brasilian Navy). All sights for position are worked out by the same method *without logarithms*, with hardly any calculation. All the other problems in navigation are easily and rapidly solved by inspection without interpolation. This work has received the favourable endorsement of the United States Hydrographic Office. Stereotyped Edition... ... ... ... ... ... ... ... ... 10 6

## ARTIFICIAL HORIZON.

**Description of an Artificial Horizon,** invented by *Capt. A. B. Becher, R.N.,* with examples of its application, afloat and ashore (1857) ... ... ... ... 1 0

# List of Nautical Works published by J. D. POTTER.

## AZIMUTHS.

| | s. | d. |
|---|---|---|
| **Davis's Sun's True Bearing, or Azimuth Tables** (30° N. to 30° S.), by *J. E. and Percy L. H. Davis.* The only means of ensuring a correct course at sea is by the use of calculated or tabular azimuths, and the latter render the operation speedy and accurate. These tables, an addendum to those of Capt. Burdwood, R.N., which preceded them, have been in very general use since their publication. The instructions in several European languages for their use have proved of great service to foreign seamen ... ... ... ... ... ... ... ... ... | 10 | 6 |
| **Davis's Supplementary Azimuth Tables** (now published separately). The Time Azimuth Tables in general use do not often give azimuths near the meridian, which are in frequent demand for ex-meridian observations, but they will be found in this book, in addition to complete tables extending to latitude 64° | 8 | 0 |
| **Davis's Star Azimuth Tables,** computed for all latitudes between **60° North** and **60° South,** by *P. L. H. Davis* This book has followed on the very general adoption of stellar observations as a means of navigation, and supplies the seaman with the same details regarding stars, as he can get from "Burdwood and Davis" when the sun is concerned. Some ingenious altitude marks are used for the first time in these tables which materially aid in the identification of any hastily observed star, as to which doubt may exist ... ... ... ... ... ... | 10 | 6 |
| **Short, Accurate, and Comprehensive Altitude-Azimuth Tables** to show the true bearing of the Sun, Moon, Planets, &c., for latitude 0° to 75° north or south; altitudes 0° to 75°; and declination 30° north to 30° south; also the Approximate Ship Time, by *A. C. Johnson, R.N.* (Published by request) ... ... | 3 | 6 |
| **Time Azimuth Diagram,** by *Hugh Godfray, M.A.* ... ... ... ... ... ... | 3 | 0 |
| **Captain Weir's Azimuth Diagram** ... ... ... ... ... ... ... ... ... | 1 | 6 |

## BOATS.

| | | |
|---|---|---|
| **A Review of the New Methods of Lowering and Disconnecting Boats at Sea,** with a proposed Amendment (1857), by *Capt. Kynaston, R.N., C.B., &c.* ... ... ... ... ... ... ... ... ... ... ... ... | 1 | 6 |

## CHRONOMETERS.

| | | |
|---|---|---|
| **Davis's "Chronometer" Tables;** or, hour angles for selected altitudes between latitudes 0° and 50°, with variations for 1′ in all elements, by *P. L. H. Davis.* Means of working a Sun "Chronometer" arithmetically have been for many years a desideratum, and have been published, in 1793, by Lalande; in 1827, by Lynn; and by Hommey, in 1863; but Mr. Davis, by the omission of useless or undesirable altitudes, and the inclusion of Variations in 1′ of Altitude, Latitude, and Declination, has made a table of great practical utility. The book, as a substitute for or a check on logarithmic calculation, is almost a necessity, and is especially useful in latitudes less than 45°. A comparison has been made in actual work of the tabular results with those obtained in the ordinary way, showing practically identical results ... ... ... ... ... ... ... ... ... ... ... | 10 | 6 |
| **Notes on the Management of Chronometers and the Measurement of Meridian Distances,** by *Rear-Admiral Charles Shadwell, F.R.S.* (1861) ... ... | 4 | 6 |

## COLUMBUS.

| | | |
|---|---|---|
| **The Landfall of Columbus on his First Voyage to America,** with a Translation of The Baron Bonnefoux's History of his previous life, also a Chart showing his Track from the Landfall to Cuba, and an outline of his subsequent voyages (1856) ... | 12 | 0 |

### COMPASS.

s. d.

**An Explanation of the Adjustment of Ships' Compasses,** illustrated with numerous diagrams, by *Commander L. W. P. Chetwynd, R.N.* .. ... ... 2 0

**Handbook to Beall's Compass Deviascope,** by *Captain George Beall,* contains, in addition to a complete explanation of this well-known instrument, much information necessary to compass correction ... ... ... ... ... 1 6

**Elementary Manual for the Deviations of the Compass in Iron Ships,** intended for the use of Seamen of the Royal Navy and Mercantile Marine, and Navigation Schools, by *E. W. Creak, C.B., F.R.S., retired Captain, R.N.* ... ... 6 6

**Practical Information on the Deviation of the Compass,** for the use of Masters and Mates of Iron Ships, by *J. T. Towson, F.R.G.S.* ... ... ... ...

AND

**Supplement to the above;** being the Questions on the Deviation of the Compass issued by the Board of Trade for the Examination for Masters' and Extra Masters' Certificates, and Answers to the Questions, by *Capt. William Mayes, R.N.* ... ... 4 0

**The Pocket Compass Corrector.** Makes an error in applying variation and deviation almost impossib'e ... ... ... ... ... ... ... ... 2 0

**The Binnacle Compass,** Corrected by itself, or the Deviation found with one Compass by both methods, and the Corrections applied, by *Capt. A. B. Becher, R.N.* 1 0

**The Storm Compass,** or Seaman's Hurricane Companion, containing a familiar explanation of the Hurricane Theory, by *Capt. A. B. Becher, R.N.*, illustrated with Diagrams and Accounts of Hurricanes ... ... ... ... ... ... ... 1 6

**Plain Deviation Curve Diagram,** by *Captain J. C. Robinson* ... ... ... 0 6

### COOKERY.

**Ship's Cook and Steward's Guide,** containing Hints for Management, and Two Hundred and Fifty Recipes, by *James B. Wilson* ... ... ... ... ... ... 1 0

### CRUISE.

**Cruise Round the World** of the Flying Squadron, 1869-1870, under the command of *Rear-Admiral G. T. Phipps Hornby* (illustrated), and Chart showing its Track ... 21 0

### CURRENTS (*See* Tides).

### DEVIATION (*See* Compass).

### DOUBLE ALTITUDES.

**A Method for finding the Latitude by the Simultaneous Altitudes of Two Stars,** by *Capt. Burdwood, R.N.* (reprinted 1896) ... ... ... ... 1 0

### EQUAL ALTITUDES.

**Tables for Facilitating the Method of Equal Altitudes,** by *F. A. L. Kitchin, B.A., Naval Instructor, R.N.* ... ... ... ... ... ... ... ... 1 0

### EX-MERIDIANS.

**Davis's Ex-Meridian Tables and Supplementary Azimuths,** by *P.L.H. Davis.* This important work is now complete. It contains Calculated Reductions to the Meridian for hour angles less than 75$^m$ and altitudes lower than 84°, Declinations and Latitudes 34° and 64° N. and S. The use of the book is quite easy to anyone familiar with the Azimuth Tables. The Supplementary Azimuths, which accompany it, give bearings too near the meridian for inclusion in "Burdwood and Davis," which are now in great request for position lines and ex-meridian work ... ... ... 10 6

**Tables for the Reduction of Ex-Meridian Altitudes,** by *J. T. Towson, F.R.G.S.* 1 0

**Ex-Meridian Diagram,** by *F. A. L. Kitchin, B.A., Naval Instructor, R.N.* ... ... 1 0

### GREAT CIRCLE SAILING.

**A Chart of South Latitudes,** beyond 20 degrees, to facilitate the practice of Great Circle Sailing; with an accompanying diagram for the determination of the courses and distances, by *Hugh Godfray, M.A.* ... ... ... ... ... ... 3 0

# List of Nautical Works published by J. D. POTTER.

## HOUR ANGLES.

s. d.

**Hour Angles of the Sun, Moon, and Stars,** for Latitude and Declination 0°-80°, and Altitude 5°-64°, together with Short Methods of finding the Longitude by Chronometer; and the Latitude and Longitude by Two "Chronometers," by *A. C. Johnson, R.N.* ... ... ... ... ... ... ... ... ... ... ... ... 3 6

## HYDROGRAPHICAL ENGINEERING.

**An Essay on Hydrographical Engineering,** as applicable to Floating Sea Barriers, Harbours, Batteries, Coast Defences, and Naval Fortifications, by *Capt. Adderly Sleigh, K.T.S., F.R.S.L.* (with Illustrations), (1859) ... ... ... ... 10 0

---

## INTERPOLATION.

**Notes on Interpolation,** Mathematical and Practical, by *Rear-Admiral C. Shadwell, F.R.S.* ... ... ... ... ... ... ... ... ... ... ... ... 2 0

## LATITUDE AND LONGITUDE.

**On Finding the Latitude and Longitude in Cloudy Weather and at other Times,** by *A. C. Johnson, R.N.* Greatly enlarged to 56 pages, with Appendix and Part II. ... ... ... ... ... ... ... ... ... ... ... ... ... 5 0

**Short Tables and Rules for finding Latitude and Longitude,** by Single and Double Altitudes, Pole Star, Lunars, &c., by *A. C. Johnson, R.N.* ... ... ... 3 0

**Scales of Latitude from 5° to 60° proportional to a scale of Longitude, where ½ in. = one mile,** arranged to facilitate the finding of position from two Sumner lines, by *R. E. Peake, A.M.I.C.E.* ... ... ... per set 5 0

**Charts** to accompany above ... ... ... ... ... ... ... ... ... ... ... each 2 6

**Tables showing the Length in Feet of a Degree, Minute, and Second of Latitude and Longitude,** with the corresponding number of Statute Miles in each Degree of Latitude; and the number of Minutes of Latitude or Nautical Miles contained in a Degree of Longitude, under each Parallel of Latitude, by *R. C. Carrington, F.R.G.S.* (1868) ... ... ... ... ... ... ... ... 1 0

*See also* **Double Altitudes, Equal Altitudes, Ex-Meridians, Hour Angles, Lunars.**

## LAW.

**Admiralty Procedure against Merchant Ships and Cargoes, &c.,** in the High Court of Justice and in County Courts, showing the various matters as to which proceedings in Admiralty can be taken, and the mode of commencing action, &c., by *R. G. M. Browne*, the Admiralty Marshal (1889) ... ... ... ... ... ... ... 10 0

**Handbook on the Law and Practice relating to Apprentices to the Mercantile Marine Service,** by *F. W. Gardner* (of the Middle Temple) ... 1 6

**The Statute Law of Merchant Shipping,** comprised in an alphabetical Analysis, and a Summary of the unrepealed Merchant Shipping Acts, from 1821 to 1888, by *R. G. M. Browne*, the Admiralty Marshal (1889) ... ... ... ... ... ... ... 6 0

## LIGHTS.

**Lights in Lyrics,** or a Glance at the Channel Lights as Piloting Marks, on a run from Scilly to the Nore, accompanied by a Parting Precept on **Compass Deviation,** addressed to all younger Mariners. With a view of the Caskets, Notes and Charts. (1859) ... ... ... ... ... ... ... ... ... ... ... ... ... 1 0

## LOGARITHMS.

| | s. d. |
|---|---|
| **Davis's Requisite Tables (Logarithmic),** by *P. L. H. Davis.* Tables of Logarithms to five places of decimals only, for practical sea work. The typography and arrangement of the book will render it suitable for habitual use, and it contains a table of Logarithmic and Natural Haversines specially designed for modern navigation ... | 7 6 |
| **Davis's Five-Figure Logs and Anti-Logs,** by *P L. H. Davis.* Specially prepared for use in Actuarial and General Calculations. These tables are very legible and do not fatigue the eye in use. ... | 5 0 |
| Ditto ditto ... with Index Tabs... | 6 0 |

## LUNARS.

| | |
|---|---|
| **Notes on the Reduction of Lunar Observations, Mathematical and Practical,** by *Rear-Admiral C. Shadwell, F.R S.* (1881) ... | 4 6 |

*See also* **Latitude and Longitude.**

## MAST-HEAD ANGLES.

| | |
|---|---|
| **Tables of Mast-Head Angles,** for five feet intervals, from 30 to 280 feet, and varying distances from a cable's length to four miles, with their application to Nautical Surveying; also the determination of distance by sound, with an example... | 2 0 |

## MEASURES.

| | |
|---|---|
| **Foreign Measures and their English Values,** compiled from Official Sources, by *R. C. Carrington, F.R.G.S.* (1864) ... | 7 6 |

## MERCANTILE MARINE.

| | |
|---|---|
| **A Voice from the Quarter-Deck on the State of our Mercantile Marine,** by *Joseph Mayne* (Master Mariner) (1876) ... | 1 0 |
| **An Address delivered to the Boys of the Training Ships "Chichester" and "Arethusa,"** by *G. M. Coxhead* (1885) ... | 0 4 |

## METEOROLOGY.

| | |
|---|---|
| **Solectrics;** a theory explaining the causes of Tempests, Seismic and Volcanic Disturbances, and how to calculate their time and place. Illustrated by over 100 di grams, by *Alfred J. Cooper,* Navigator, King's Medallist ... | 10 0 |
| **The Causes of Weather and Earthquakes** (with four Diagrams), by *Alfred J. Cooper* (1902) ... | 2 0 |
| **Light as a Motive Power,** a Series of Meteorological Essays (1875), by *Lieut. R. H. Armit, R.N.* ... | 15 0 |

*See also* **Winds.**

## NAVIGATION.

| | |
|---|---|
| **Inman's Nautical Tables.** A New Edition of this standard work, revised and brought thoroughly up to the present date, by the *Rev. William Hall, R.N.,* and containing all the aids to rapid fixing of position which are essential in modern Navigation ... | 16 0 |
| **Lectures on Elementary Navigation,** by *Rev. J. B. Harbord, M.A. (Retired Naval Instructor, R.N.; late Inspector of Naval Schools, Admiralty; Examiner in Navigation and Nautical Astronomy for the Department of Science and Art; Author of "Glossary of Navigation")* ... | 7 6 |
| **An Introduction to the Practice of Navigation and Nautical Astronomy,** by *R. E. Hooppell, M.A., F.R.A.S.* ... | 3 6 |

### SAILING DIRECTIONS—*Continued.*

s. d.

**Winds and Currents of the Mediterranean,** by *Capt. A. B. Becher, R.N.*, with remarks on its Navigation at different Seasons of the Year, compiled from various authorities, chiefly Spanish (1864) ... ... ... ... ... ... ... ... ... 3 0

**Navigation of the Atlantic Ocean,** by *Capt. A. B. Becher, R.N.*, with an account of the Winds, Weather and Currents found therein throughout the year (with Charts) (1892). ... ... ... ... ... ... ... ... ... ... 5 0

**Navigation of the Indian Ocean, China and Australian Seas,** by *Capt. A. B. Becher, R.N*, with an account of the Winds, Weather, and Currents found therein throughout the year (with Charts) (1864) ... ... ... ... ... 5 0

**Chart of the Sulina Branch of the Danube** (European Commission of the Danube), surveyed by Robert Hansford, Surveyor of the Commission, under the direction of C. A. Hartley, Engineer in Chief (showing 45 nautical miles of the River from Sulina), size 10 ft. × 2 ft. 3 in. (1860) ... ... ... ... ... 20 0

### SAIL-MAKING.

**Remarks on Rigging Ships with Flat Surface Sails,** by *Lieut. William Congalton, R.N.R.* (1865) ... ... ... ... ... ... ... ... ... 2 0

### SALVAGE.

**Salvage Operations.** The floating of H.M. Battleship "Howe." Illustrated by 23 plans and photographs, by *Rear-Admiral G. T. H. Boyes, late Flag-Captain* H.M.S. "Anson" (1900) ... ... ... ... ... ... ... ... ... ... 5 0

**How Ships are Lost, and How to Save Life and Property at Sea** (Illustrated), by *W. P. B. Manser* (1877) ... ... ... ... ... ... ... 1 0

### SEAMANSHIP.

**Under Square Sail,** by *Capt. Withers* (1898) ... ... ... ... ... ... ... 2 0

**Under the Red Ensign; or, "Going to Sea,"** by *Thomas Gray* (1892) ... 1 6

### SEXTANTS.

**Course and Position by Sextant Observations of two known Objects,** *by Lt.-Col. English, late R.E.* ... ... ... ... ... ... ... 0 6

**Captains' and Officers' Bridge or Poop Companion.** Tables for finding the distance of an object at sea by inspection (without the use of pencil or paper), at the same time giving the distance the ship will go wide of the object before getting to it, and the course to steer to obtain a required distance. The above gives, with the aid of a compass only, the distance of a moving ship from any fixed object. By *A. Hütteroth* ... ... ... ... ... ... 2 6

**Stars and Sextants.** Star Distance Tables for facilitating the use of Lord Ellenborough's method of Correcting the Centring and Total Errors of Sextants at Sea, by *John Abner Sprigge, Wm. Fraser Doak, M.A., F.R.A.S., T. Charlton Hudson, B.A., F.R.A.S., of H.M. Nautical Almanac Office, Admiralty,* and *Arthur S. Cox, B.Sc., A.R.C.S.* ... ... ... ... ... ... ... ... ... ... ... 2 6

### SHIPPING.

**Historical Notes on Shipping,** by *P. L. Isaac, M.I.N.A.* (1879) ... ... ... 1 0

# List of Nautical Works published by J. D. POTTER.

## SIGNALS.

| | s. | d. |
|---|---|---|
| **Signal Cards—British System,** with Plates, containing Instructions for Semaphoring by **Day,** and with the Morse Code by **Day** or **Night,** together with the principal "Urgent" Light or Sound Signals, in accordance with the New Code. Also, Sheet of New Code Flags (34 Flags, coloured). Compiled by *J. Whitly Dixon* (*Retired Captain, Royal Navy*). (Size, 24½ × 19½) ... ... ... ... ... ... | 1 | 6 |
| Ditto ditto mounted on thick card | 2 | 0 |

## SPEEDS.

| | | |
|---|---|---|
| **Speed and Consumption of Steam-Ships,** with Algebraic Formula for Economical Speed, and Rules for calculating the alterations in Draught and Trim corresponding to Changes in Displacement, and for using the Hydrometer to estimate those due to Differences in the Specific Gravity of the Water; for use in the Royal Navy and Mercantile Marine; by *J. F. Ruthven, Master Mariner, late Lieut. R.N.R., Assoc.Inst.N.A., M.R.U.S.I., Younger Brother of the Trinity House, F.R.G.S.* ... | 2 | 0 |
| **Speed Tables,** for finding the distance run in a given time at a given speed, between the limits of 10 to 18 knots, by *J. D. Macpherson* (Pacific Steam Navigation Co.) ... | 1 | 0 |

## STARS.

| | | |
|---|---|---|
| **The Bearings of the Principal Bright Stars** of greater declination than 23° north or 23° south; also those of the Moon and Planets when similarly situated, by *A. C. Johnson, R.N.* (Published by request) ... ... ... ... ... ... ... | 3 | 0 |
| **Pole-Star Latitude:** a Method of Finding the Latitude from an Altitude of the Pole Star, by *Darnton Hutton* (Master Mariner), *B.A., M.Inst.C.E.* ... ... ... ... | 1 | 0 |
| **Position-Line Star Tables.** A new and simple method of fixing ship's position by observations of stars near Meridian and Prime Vertical without logarithmic calculation, by *H. B. Goodwin, R.N.* ... ... ... ... ... ... ... ... ... | 5 | 0 |
| **Tables for Facilitating the Determination of the Latitude and Time at Sea by Observations of the Stars,** by *Rear-Admiral C. Shadwell, F.R.S.* | 2 | 6 |
| **A Handbook for Star Double Altitudes,** by *A. C. Johnson, R.N.,* with directions for selecting the Stars ... ... ... ... ... ... ... ... ... ... | 2 | 6 |

*See also* **Sextants.**

## STABILITY.

| | | |
|---|---|---|
| **A New Theory of the Stability of Ships,** second edition, revised and enlarged, (with 28 diagrams), by *Alf. J. Cooper* (1899) ... ... ... ... ... ... | 2 | 0 |

## SURVEYING.

| | | |
|---|---|---|
| **Practical Nautical Surveying and the Handicraft of Navigation,** by *Com. T. A. Hull, R.N.* ... ... ... ... ... ... ... ... ... ... | 3 | 0 |
| **Practical Observations on Surveying** (on determining the Position of a Vessel when Sounding), by *Commander P. F. Shortland, R.N.* ... ... ... ... ... | 1 | 0 |

## TIDES.

| | | |
|---|---|---|
| **Moxly's Theory of the Tides,** with numerous diagrams by *Capt. J.F.Ruthven, F.R.G.S.* | 2 | 0 |
| **Tide Charts of the English and Bristol Channels and entrance of the Thames,** compiled from the Admiralty Tide Tables, by *Algernon Heber Percy,* late Lieut. Royal Navy ... ... ... ... ... ... ... ... ... | 5 | 0 |
| **The Direction and Rate of the Tidal Streams at every Hour, for 48 Localities between the Nore and Scilly Isles,** compiled from Admiralty Sources only, by *F. Howard Collins* ... ... ... ... ... ... ... ... | 2 | 0 |
| **Twelve Charts of the Tidal Streams of the Channel Islands and Neighbouring French Coasts,** by *F. Howard Collins* ... ... ... ... | 4 | 0 |

## TIDES—*continued*.

s. d.

**The General Direction of the Tidal Streams in the North Sea for every Hour "before" and "after," and at High Water, Dover,** compiled by *Com. G. K. Gandy, R.N.R.*, from Official Publications (on one sheet, size 23 by 17 inches) ... ... ... ... ... ... ... ... ... ... 1 0

**The Universal Tidal Ready Reckoner,** calculated by *Capt. W. E. Hutchinson*. 1 6

**The North Sea.** Its Physical Characteristics, Tides, Currents and Fisheries, by *W. H. Wheeler, M.Inst.C.E.* ... ... ... ... ... ... ... ... ... 2 6

**The Currents on the South-Eastern Coasts of Newfoundland and the Amount of Indraught into the Largest Bays on the South Coast,** from Investigations of the Tidal and Current Survey in the Season of 1903, by *W. Bell Dawson, M.A., D.Sc., F.R.S.C., M.Inst.C.E., Superintendent*. Published by order of the Minister of Marine and Fisheries, Ottawa ... ... ... *No charge.*

**The Currents in the Gulf of St. Lawrence, including the Anticosti Region, Belle Isle, and Cabot Straits,** condensed from the Reports of the Survey of Tides and Currents for the Seasons of 1894, 1895, and 1896. Published by order of the Minister of Marine and Fisheries, Ottawa ... ... *No charge.*

**The Currents at the entrance of the Bay of Fundy and on the Steamship Routes in or approaching Southern Nova Scotia,** from investigations of the Tidal and Current Survey in the Season of 1904, by *W. Bell Dawson, M.A., D.Sc., F.R.S.C., M.Inst.C.E., Superintendent*. Published by the Department of Marine and Fisheries, Ottawa, Canada ... ... ... ... ... ... *No charge.*

**The Currents in Belle Isle Strait,** from Investigations of the Tidal and Current Survey in the Seasons of 1894 and 1906. By *W. Bell Dawson, M.A., D.Sc., F.R.S.C., M.Inst.C.E., Superintendent*. Published by the Department of Marine and Fisheries, Ottawa, Canada ... ... ... ... ... ... ... ... ... *No charge.*

**Tables of Hourly Direction and Velocity of the Currents and Time of Slack Water in the Bay of Fundy and its Approaches as far as Cape Sable.** From Investigations of the Tidal and Current Survey in the seasons of 1904 and 1907. By *W. Bell Dawson, M.A., D.Sc., M.Inst.C.E., Superintendent*. Published by the Department of Marine and Fisheries, Ottawa, Canada *No charge.*

*See also* **Time.**

## TIME.

**How to Find the Time at Sea in less than a Minute,** being a New and Accurate Method, with specially adapted Tables, by *A. C. Johnson, R.N.* ... ... 2 6

**Time, Tide, and Distances.** A handy book of reference for the Shipowner, Underwriter, or Traveller. Contains the World's Time compared with Greenwich; the Tides round the British Coasts and those from Bergen viâ the Eastern Route to Japan with that at London Bridge; approximate Distances from Home Ports to Home and Foreign Ports (over 13,000 references); and a Speed and Distance Table for Rates of Speed from 8 to 21 knots for distances up to 14,000 nautical miles, by *J. McKirdy, R.N.R.* ... ... ... ... ... ... ... ... ... ... 15 0

**Time-Altitudes for Expediting the Calculation of Apparent-Time, &c.,** by *A. C. Johnson, R.N.* ... ... ... ... ... ... ... ... ... 4 0

**The Blue Coat Boys' Clock.** A dial showing the simultaneous time of day at all parts of the earth's surface, size 20 × 17 inches ... ... ... ... ... ... 5 0

*See also* **Azimuths, Chronometers, Tides.**

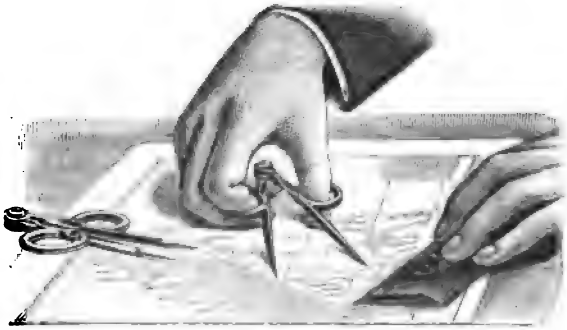
## WINDS.

**The True Direction and Velocity of Wind,** observed from Ships while Sailing, by *James N. Miller* (Member of the Liverpool Polytechnic Society), with Table for Indicating the True Direction of the Winds at Sea (1870) ... ... ... ... 0 6

**The Wind in its Circuits:** with the explanation of the Origin and Cause of Circular Storms and Equinoctial Gales; illustrated with numerous Diagrams and a Chart of the Prevailing Winds of the World for Spring and Summer, by *Lieut. R. H. Armit, R.N.* (1870) ... ... ... ... ... ... ... ... ... ... 7 6

*See also* **Meteorology.**

## F. HOWARD COLLINS'S SINGLE-HANDED DIVIDERS.
### Specially Designed for Navigators.



The advantages of these Single-handed Dividers are that they can be picked up from the table by one hand alone, and the legs opened or closed by the finger and thumb of the same hand, without any other assistance whatever.

Navigators are thus enabled to work, and retain in position, the parallel ruler with one hand, while distances are being measured with the other. It is needless to say that this enables much time to be saved in laying off courses and distances, a matter for consideration in these days of steamers travelling a mile in less than two-and-a-half minutes.

The joint itself is of an entirely new form, being made a round ball. This is found to be a great advantage, and the best form for rolling between the thumb and fore-finger when "stepping" distances; as for instance, in measuring fifty miles by the legs being set to ten miles of the chart scale.

These Dividers are of the *best make* in German-silver, **price 7s. 6d. per pair in cardboard box,** and with special cleat and screws for fixing to the chart-room bulk-head to hold them when not in use.

"None seem to be quite on a level of excellence with these."—*Merchant Service Review.*

"The price is certainly a reasonable one."—*The Shipping World.*

# INCORRECT CHARTS.

## SPECIAL BOARD OF TRADE OFFICIAL NOTICES TO SHIPOWNERS.

### NOTICE TO SHIPOWNERS AND AGENTS.

The attention of the Board of Trade has frequently been called to cases in which British vessels have been endangered or wrecked through Masters attempting to navigate them by means of antiquated or otherwise defective Charts.

The Board of Trade desire, therefore, to direct the especial attention of Shipowners and their Servants and Agents to the necessity of seeing that the Charts taken or sent on board their Ships are corrected down to the time of sailing. Neglect to supply a Ship with proper Charts will be brought prominently before the Court of Inquiry in the event of a wreck occurring from that cause.

The Official Catalogue of Charts, plans and sailing directions, published by the Admiralty (issued annually in March), can be obtained free of charge on application to the Chart Agency, 145, Minories, London, E.C., or from any of the sub-agencies at the Home or Foreign Ports.

*Statement, showing the number of New British Admiralty Chart Published, Corrections made to the Chart Plates, and Quantities Printed, for the years* 1885, 1890, 1895, 1900, *and* 1905.
